國立中央大學

講題：Positivity of holomorphic vector bundles

時間：115年05月13日(星期三) 10:10-11:00

地點：理工一館A316

摘要

We will introduce holomorphic vector bundles, Hermitian metrics, Finsler metrics, and their curvatures. Some basic properties will be given and proved. Then we will discuss progress towards the conjectures of Griffiths and Kobayashi, especially on the tensor product of positive bundles. Some open problems will be mentioned along the way.
